ADNM | DTV NEMA 3 (TV Studio Camera Flicker Free)

Tivoli, LLC. reserves the right to modify this specification without prior notice.

Project: 

**Features**
- Switching electronic power supply
- Constant Voltage
- Universal input voltage: 100-277V AC
- Single and multiple 12V or 24V DC outputs
- NEMA 3R Rain-tight enclosure for wet locations
- 5 year warranty

**Environmental**
- MTBF: 100,000 hrs. at full load and 25°C
- Operating temperature: -40°C - +80°C (Full load)
- Storage temperature: -65°C - +90°C
- Heat dissipation: Convection

**Features**
- Steel enclosure
- Bracket mount and ½” knockouts for conduit and fittings

**Electrical Data**
- Secondary circuit maximum protection for Class 2 circuits: 5A for 12V DC, 4A for 24V DC
- Voltage regulated
- Voltage regulated +/-3%
- Auto overload / short circuit / over voltage protection

A Removing the cover
B Removing the strain reliefs
C Mounting the LINEARdrive
D Making the wire connections
E Fastening the strain reliefs
F Configuring the LINEARdrive
G Replacing the cover
CAUTION: The device may only be connected and installed by a qualified electrician. All applicable regulations, legislation and building codes must be observed. Incorrect installation of the device can cause irreparable damage to the device and the connected LEDs.

12V - 48V DC IN
To connect the driver to a 12-48V DC power supply unit (PSU), connect the PSU’s positive voltage supply wire to the VDC+ connector and the PSU’s negative voltage supply wire to the VDC connector. The driver and LEDs can use the same PSU.

EXT In
You have the possibility to connect an external control device (10 Ω potentiometer or show selection switch) to the driver’s Ext in+ and Ext in- connector. Configure the driver for use with an external control device over the 3-button user interface.

DA+ / DA-
Use these connectors to connect the driver to a DALI network. Always combine a DA+ and a DA- connector for either data in-put or data output.

DMX In/LedSync Out
Use these connectors when the driver is used in a DMX network. For DMX in, connect the network cable’s DMX+, DMX- and DMX shielding wire (the orange/white, orange and brown wire in a CAT5 cable) to the DMX in+, DMX in- and DMX in shield connector respectively. For LedSync out, connect the network cable’s data+, data and shielding wire to the LedSync out+, LedSync out- and LedSync shield connector respectively.

LED groups
Indicates the location of the connectors for your LED groups. R(ed) represents channel 1, G(reen) represents channel 2, B(lue) represents channel 3 and W(hite) represents channel 4. The default group color allocation can be changed over the 3-button user interface.
